## 1. Introduction to water conservation

Our college has very good water management plant to support all our water needs including hostel. The water management plan is supported with the rain water harvesting and underground tank. The ground water is circulated to overhead tank through underground tank.

The rainwater is harvested to utilise this water for ground water recharging. This is very conventional method of storage of water.

The borewell is constructed inside the college. The overhead and underground water storage tanks are clean periodically and maintained by plumbers and civil maintenance people to take necessary action if required. From the underground tank, water is circulated and store in overhead tank with the help of machine.

The water from overhead tank is separately treated by RO plant and used for drinking purpose. The drinking water is supplied in both the wings A & B. A well-arranged water pipe line system is attached to the overhead water tanks to ensure the continuous supply of water in the college.

Sensor based water level controller is installed on the overhead water tank to avoid the overflow of water from the water tank. This attempt conserves the water as well as energy.

## 7. Guess lecture on “Catch the Rain” to Create Awareness about Water Conservation

The slide features a light blue header with the text "Catch the Rain (Where it Falls) ...." and an image of a hand catching rain. Below this, a red box contains the name "Aprup Adawadkar" and his credentials: "Founder President – Paryavaran Pratham, Process Safety, Disaster Risk Management, Environment Consultant and Trainer". His email is listed as "adawadkar@gmail.com". The date "9th August, 2021" is at the bottom right. The meeting interface shows Prashant Amale as the presenter and a grid of participants including Jeet Pawar, Dinesh Chaple, Priyanka Rahmatkar, Sonal Motghare, Mrunali Akhare, and pratik naole.

The slide has a light blue header with the text "Don't allow water to run out of your boundary". The main content is a list of activities to plan under the 'Catch the Rain' campaign, including: making check dams and water harvesting pits, rooftop RWHS, removal of encroachments, de-silting of tanks to increase storage capacity, removal of obstructions in channels, and repairing of wells. The text emphasizes "to put water back to aquifers" and "active participation of people". The meeting interface shows Aprup Adawadkar as the presenter and a grid of participants including Mrunali Akhare, Dinesh Chaple, Priyanka Rahmatkar, Sonal Motghare, aniruddha biyani, and pratik naole.

## 8. Water conservation policy and notice

- The taps should be closed properly after each use to avoid over use of water.
- The administrative authorities should immediately repair leaking taps.
